

WELLlife™

## Technical Bulletin: Screening for Avian Influenza (Bird Flu)

The US Centers for Disease Control and Prevention (CDC) has identified avian influenza (bird flu) as a public health challenge after a multistate outbreak of avian influenza A virus in 2024 and the confirmation of human infection with the virus, prompting the CDC to closely monitor emergency department data for any unusual patterns.

### About Avian Influenza

Avian influenza is a disease in birds caused by infection with avian influenza Type A viruses. Highly pathogenic avian influenza viruses result in severe disease and high mortality in infected poultry and other wild or domestic animals (including dairy cattle).

### Screening for Avian Influenza

The WELLlife™ COVID-19/Influenza A&B Test for Home (OTC) and Professional use can detect the H7N3 avian influenza A variant. The test is 510(k) cleared according to the U.S. Food and Drug Administration (FDA) process.\*
